

I found the EMIS/ISO Audit process to be very valuable and informative. We had a rough picture how our energy was being used however the initial audit gave us a very detailed picture of our energy usage and was presented in a format that was relatable to all functional areas of the business. The EMIS/ISO audit was very comprehensive and helped us visualize our processes from a new perspective.

I also feel it is critical that we are implementing EMIS as part of the ISO process. The EMIS system allows us to dig deeper, examine the minute details of our process and integrate energy efficiency into our process as well as develop energy saving projects. I don't see how we would be able to effectively drive energy usage down without measurement, target setting and verification made possible by EMIS.

I also want to complement EPS on the quality of their consulting work and the immediate and professional responses we get when asking for help or requesting information. It has been a pleasure to work with EPS from the beginning of this process and your team's guidance is crucial to our successful implementation of ISO 50001. The Focus on Energy SEM Leaders Program was instrumental in bringing us specialized resources to help us establish a comprehensive energy management system.
